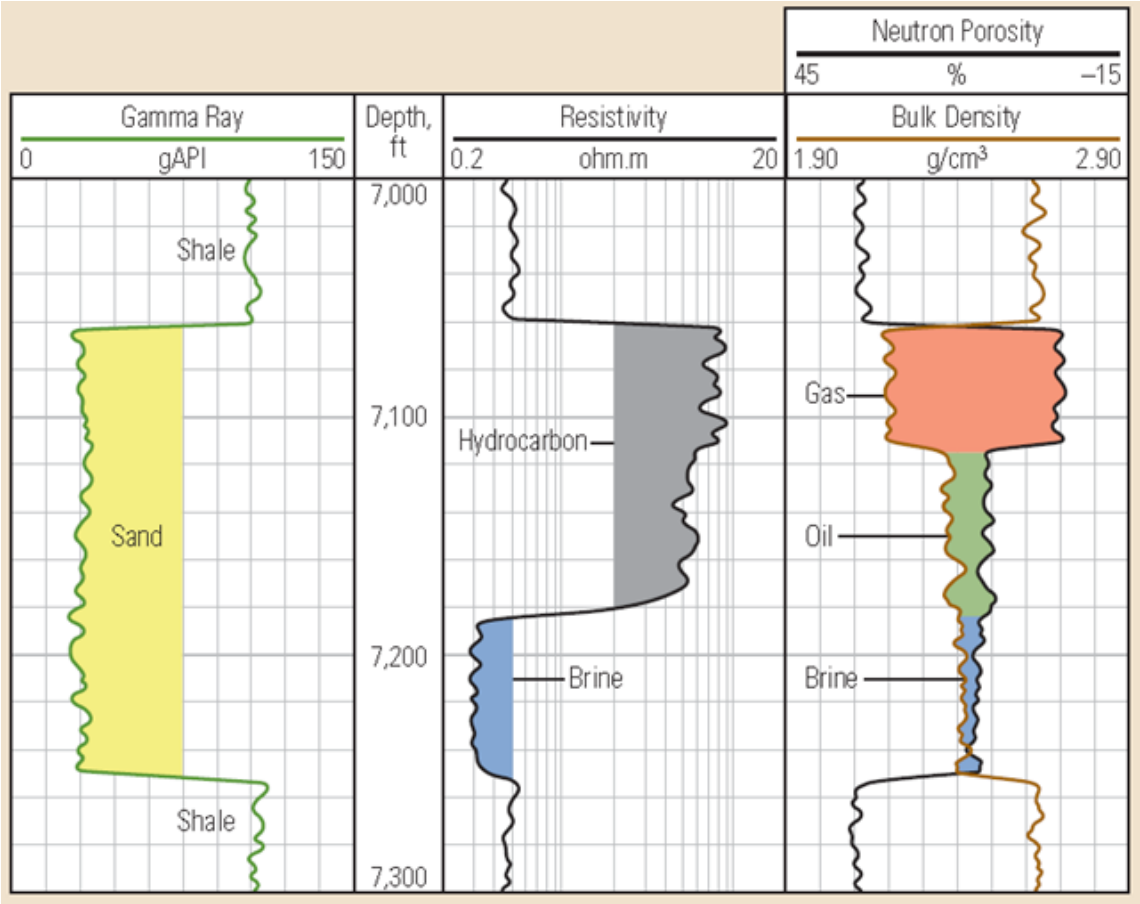
2 - Control Flow Statements

Conditional Statements

If Statement

❑ Assignment:

Write a simple log interpretation program based on the Image attached.



2 - Control Flow Statements

Looping Statements

While Loops

Nested If inside While Loop

While Loop depends on iteration and condition. So It can be used in any Similar Computations

❑ Assignment:

- Starting with Gradient Value of 0.09
- Write A program that reads the Pressure value from a prompt, and as long as the pressure is Less than 5000,

  calculate the pressure using the equation:

  Pressure = pressure * Gradient

  Assume the pressure is increasing with increment of 1000
- print the final pressure value

Hint: Start inputting the pressure with Initial Value of 3000

- Bonus:
- Try to Modify the program so if the gradient also is increasing with an increment of 0.1 each step.
